 Weight (incl. Standard-Akku BL-5J): 114g
 Display Size: 6,1cm Display Diagonal
 320 x 240 Pixel
 (For more information please see www.nokia.de)

Fully backwards compatible with Rinstrum R32x indicators, the Rinstrum Handy App is an ideal accessory for on-board weighing applications. Via a Bluetooth connection the weight information on the indicator can be easily read from a distance of up to 30m on an 'App' enabled Nokia C3-00 mobile phone.

Included in the scope of delivery are an R32x indicator and a Nokia C3-00 mobile phone (Slate Gray). The 'App' will be uploaded and configured by Rinstrum prior to delivery, the network provider can be chosen by the customer after receipt of the goods.

The Rinstrum Mobile App allows the driver to have one single mobile phone to make and receive calls and to view the weighing instrument e.g. from the safety and security of the vehicle cab.

For easier handling the App can be set to a hot key on the Nokia handset allowing the driver to press only a single key to access the weighing app and enjoy easy viewing. The display will then show the display of the indicator.

Already existing indicators can also be upgraded with little fuss or disruption.

..now that's smart weighing
