

Smart Weighing – X320 and R320/R323 Remote Operator Console

November 2009

R400 Indicator combined with an X320

Combine the tough X320-K309 remote operator console with an R400 Series indicator for a cost effective reliable remote control solution for harsh environments.

Benefits of using an X320-K309 as a remote unit:

- Compact single solution
- No need to wire mechanical buttons
- No external housing required
- Only require a single 5 core cable to run RS232 and DC power to the X320 from the R400 indicator

The operator has Zero, Tare, Gross/Net functions along with a function key available at the X320 remote console. The function key and print key can be mapped to trigger one of F1-F3 or IO1-32 on the master R400.

Weighbridge Applications

The X320-K309 is suitable as an outside remote driver interface at a weigh bridge using an R400 series indicator.

X320 Tough IP69K Housing

The X320 is constructed of a high tech plastic alloy that is:

- Chemical resistant
- Temperature resistant
- Impact resistant

Double 'o' ring seal provides superior performance over traditional stainless steel enclosures.

IP69K rating: is the industry's highest environmental protection rating - designed to withstand cleaning with high pressure water jets (1400psi) at high temperatures (up to 80°C) from multiple angles.

K309 Software

The K309 software provides the remote console functionality and can be installed on either an X320 or R320/R323. The X320 is IP69K and IP68 while the R320/R323 are IP65.

The X320-K309 and R320-K309 will interface with all the software application variants across the R400 Series indicators – K401, K402, K410, K411 and K481.

....now that's a smart solution for a tough reliable remote console
